

## Parking Ticket Box T10

|                      |  |
|----------------------|--|
| Product Name         | Tenet Vehicle Paper Ticket Parking Access Control terminal Box |
| Application          | Parking access control system/parking card/ticket system       |
| Equipment model      | TPM-0630-T10-1 (in) TPM-0630-T10-2 (out)                       |
| LAN interface        | 1, 100/10mbps, connecting gateway                              |
| Dimensions           | 480 X 1380 X 320mm   |
| Working power supply | AC/220V, 50~60Hz   |

### How does card dispenser machine for Parking System works?

1. A vehicle approaches entry and triggers Loop Coil of Entry Station.
2. The visitor presses ticket button of Entry Station to get a proximity card.
3. Entry Barrier opens automatically, and it closes automatically after the vehicle passes loop coil of EntryBarrier.
4. He walks to the charging point which is located in central place instead of the exit, and gives the card to the cashier.
5. Payment information will be shown on the display.
6. The visitor pays cash, then the cashier return back the card to him.
7. Within given time he drives to the exit and inserts the card into unmanned Exit Station, and then Exit Barrier open.
8. Exit Barrier closes automatically after the vehicle passes the loop coil of Exit Barrier.

### Main Feature

1. TCP/IP communication & data transmission.
2. 32-bit ARM dual-core processing technology.
3. Easy to install, debug and maintain; modular structure, high integration
4. RS232/485, Wiegand 26/34 various RFID interface are available in one control board
5. Nesting function available;Speaker available;Off-line working available;
6. Extendible long distance read function;.Extendible plate-number identification and auto-printing;
7. Multiple charging mode, charging standards can be defined as user;
8. Flexible system configuration, can be extended to multi-level parking lot management system;
9. IP44 waterproof, dustproof and rustproof
10. EM/Mifare Proximity card, UHF card available;
